First Quarter 2004 Discharge Monitoring Report
Waste Discharge Requirements Order Number R4-2002-0030 (Series 007)
Compliance File Number CI-95-036, SLIC 0410
Project Site: Former Boeing C-6 Facility (Building 2 Area), Los Angeles, California

Date:
April 23, 2004

Dear Information Technology Unit:

Contact:
James K. Nguyen, P.E.

On behalf of Boeing Realty Corporation (BRC), ARCADIS is submitting this quarterly monitoring report per the Waste Discharge Requirements (WDR) Order Number R4-2002-0030 (Series 007). The purpose of this report and future WDR reports is to provide the Los Angeles Regional Water Quality Control Board (RWQCB) with amendment and monitoring activities at the referenced project site. The site is located at 19503 Normandie Avenue. Figures 1 and 2 illustrate the site location and the site layout, respectively.

jnguyen@arcadis-us.com

Project Number:
CA000594.0003.00005

This monitoring report summarizes groundwater amendment and monitoring activities performed during the first quarter of 2004. The sections below summarize amendment activities (Section 1.0), groundwater monitoring (Section 2.0), and provides a certification statement (Section 3.0).

1.0 Amendment Activities

As part of the *in-situ* reactive zone pilot test in the Building 2 Area, 138 amendment points were installed to deliver a carbohydrate solution to the groundwater treatment areas. Underground lateral distribution lines were connected to each amendment points and routed to remote access vaults (Vaults 1, 2, 3, and 4). The amendment points, lateral lines, and vaults are illustrated on Figure 2.

The first amendment event was initiated on February 23 and 24, 2004. Carbohydrate solution was premixed at a facility in the City of Vernon and was delivered to the site in 5,000-gallon tanker trucks. The tanker trucks were rated to contain only food-grade products. The carbohydrate solution included 10% molasses and 90% potable

April 23, 2004

water. Sodium bicarbonate was also added in an effort to maintain a neutral pH in the groundwater.

Once the tanker truck arrived onsite, a 3-inch diameter hose was connected from the tanker truck to a truck-mounted manifold system. The manifold system consisted of 12 delivery branches, each with a flow control valve, flow totalizer, and pressure gauge. This system was used to monitor the flow and pressure to each amendment point during the delivery process. A 1-inch diameter rubber hose was used to connect the manifold system to the individual amendment point connections located inside the vaults. Delivery of the solution was considered complete once the design volume was achieved.

During amendment activities on February 23 and 24, carbohydrate solution was observed to be seeping from joints in the concrete floor of unoccupied Building A (Figure 2). Amendment activities were immediately terminated. Recovery and disposal of the carbohydrate solution was completed per the *Notification of Leakage of Molasses Solution* letter dated February 27, 2004 to the RWQCB. Potable water was used to flush the amendment points and lateral lines following carbohydrate delivery. Flushing was conducted on March 1, 2, and 3, 2004. Approximately 25 gallons of potable water per amendment point was used to flush the delivery system free of residual carbohydrate solution to prevent potential fouling. Amendment points not used during the initial amendment event were not flushed. Approximately 76,000 gallons of solution (carbohydrate and potable water) were added to the groundwater during this reporting period (Table 1).

Due to the seepage of the carbohydrate solution, the condition of the amendment system is being evaluated; potable water is being used for this testing. Carbohydrate delivery will resume after the water test is completed, the potential causes of the spillage are assessed, and the delivery method is modified to prevent future spillage. Currently, the water test is scheduled for late April or early May 2004.

2.0 Monitoring Activities

During the first quarter of 2004, no groundwater monitoring was conducted. Per the WDR permit, the first monitoring event will be conducted 2 weeks after completing the first amendment event. Since the first amendment event is presently scheduled to be completed in June 2004, the first monitoring event will likely be conducted in late June or early July 2004. In addition to the WDR monitoring, supplemental monitoring was requested during the interim water testing of the system (*Supplemental Groundwater Monitoring* letter dated April 22, 2004). Per the

April 23, 2004

supplemental monitoring, Boeing is proposing to perform a supplemental monitoring event in May 2004.

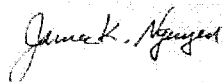

3.0 Certification Statement

I declare under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who managed the system or those directly responsible for gathering the information, the information submitted, is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

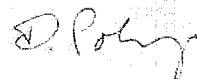

If you have any questions or comments regarding this discharge monitoring report, please contact Jim Nguyen or David Poley at (714) 278-0992.

Sincerely,

ARCADIS G&M, Inc.
